

Dataset Usage Declaration for Multimodal AI Health Diagnosis Assistant

This document lists all Kaggle datasets being utilized to develop a comprehensive multimodal AI health diagnosis assistant. Each dataset is linked directly to its Kaggle page.

1. Chest X-Rays

Application Feasibility

Using these datasets, you can train and validate models for image-based diagnosis (X-ray, MRI, ultrasound, dermatology) and symptom-based chatbot interactions. Combined, they cover the major input modalities—medical imaging, lab results, and symptom mappings—required to build an end-to-end multimodal health diagnosis assistant.
